

TABLE OF CONTENTS

PREFACE	4
PRINTING/REVISION HISTORY	4
NOMENCLATURE	5
Matrix Notation	5
Operator Notation	5
Roman Alphabet	6
Greek Alphabet	8
1. INTRODUCTION	1
1.1 Degrees of Freedom	2
1.2 Basic Assumptions	5
2. SINGLE DEGREE OF FREEDOM SYSTEM	1
2.1 Theory	1
2.2 Laplace Domain Theory	3
2.3 Definition Of Terms	5
2.3.1 Critical Damping	5
2.3.2 Fraction of Critical Damping - Damping Ratio (Zeta)	5
2.4 System Classification	6
2.5 Analytical Model - Scalar Polynomial	18
2.6 Analytical Model - Partial Fraction	18
2.7 Frequency Response Function Representation	19
2.8 Impulse Response Function Representation	21
2.9 Change of Physical Parameters	23
2.10 Estimating Partial Fraction Parameters	27
2.10.1 Example	30
2.11 Why Study/Emphasize SDOF Systems?	35
3. MULTIPLE DEGREE OF FREEDOM SYSTEMS	1
3.1 Theory	1
3.2 Solution of the Eigenvalue Problem	5
3.2.1 Two Degree of Freedom Example: Undamped, Unforced	6
3.3 Weighted Orthogonality of Modal Vectors	9
3.4 Modal Vector Scaling Example	12
3.5 Principal Coordinates - Modal Coordinates	13
3.6 Two Degree of Freedom Example: Undamped, Forced	18
3.7 Proportional Damping	23
3.8 Modal Vectors from the System Matrix	24
4. FREQUENCY RESPONSE FUNCTION DEVELOPMENT	1
4.1 Theory	1
4.2 Analytical Model - Scalar/Matrix Polynomial (MDOF)	

4.3	Analytical Model - Partial Fraction (Residue)	8
4.4	Modal Vector Example	10
4.5	Analytical Model - General Partial Fraction (Residue)	14
4.6	Residue Relationship to Modal Vectors	18
4.7	Residue Relationship to Modal Mass	19
5.	GENERAL DAMPED SYSTEMS	20
5.1	Non-Proportionally Damped Systems	1
5.1.1	Weighted Orthogonality of the Eigenvectors	1
5.2	Proportionally Damped Systems	3
5.3	Example with Proportional Damping	5
5.3.1	Frequency Response Function Implications	8
5.3.2	Impulse Response Function Considerations	11
5.4	Non-Proportional Damping Example	14
5.4.1	Impulse Response Function Example	23
5.5	Summary of Modal Parameters (Undamped and Damped Systems)	27
6.	FREQUENCY RESPONSE FUNCTION SYNTHESIS	36
6.1	Displacement, Velocity and/or Acceleration Data	1
6.2	Skewed Sensor Orientation	7
6.3	Simulation of Structural Response	8
7.	MODAL SCALING	8
7.1	Proportionally Damped Systems (Modal Mass)	1
7.1.1	Modal Vector Scaling	4
7.1.1.1	Unity Modal Mass	4
7.1.1.2	Unity Modal Coefficient	5
7.1.1.3	Unity Modal Vector Length	5
7.1.2	Modal Vector Scaling Example	6
7.2	Non-Proportionally Damped Systems (Modal A)	7
7.3	Modal Mass, Modal A Units Discussion	9
8.	ADVANCED MODAL ANALYSIS CONCEPTS	1
8.1	Introduction	1
8.2	Measurement Degrees of Freedom	1
8.3	Mathematical Models	2
8.4	Repeated Modal Frequencies	6
8.4.1	Repeated Modal Frequency Example: Residue Synthesis	11
8.4.2	Repeated Modal Frequency Example: Modal Vector Solution	16
8.5	Left and Right Eigenvectors	18
8.6	Summary/Conclusions	20
8.7	References	20
Appendix A: MEASUREMENT DISPLAY FORMATS		1
Appendix B: MATLAB Script Files
